NEW JERSEY STATE DEPARTMENT OF ENVIRONMENTAL PROTECTION**MEMO**

TO David C. Longstreet *DCZ*
FROM Al Iannuzzi *AI* through Steve Carfora *SC* DATE December 2, 1982
SUBJECT SCP-Carlstadt

Scientific Chemical Processing Co. (SCP), 216 Paterson Plank Road, Carlstadt, has been closed down for more than two years. It has come to my attention from frequent DWM monitoring that several problems and potential problems are present at this site. Recent inspections indicate that several storage tanks, tank trailers, and drums apparently containing a corrosive waste, are corroding through the containers and resulting in spillage onto soil.

Samples #AI158A and AI159A taken of spillage at SCP (see attached analysis) on 4/21/82, indicate that this material has an ignitable value less than the 140°F limit. Since the material stored at this facility has ignitable characteristics and it is located in a close proximity to the NJ Sports Complex and a heavy industrialized area, it would appear that this facility poses a substantial fire hazard. Review of the attached letter dated August 31, 1982 from DAG David W. Reger to David Longstreet is also helpful in placing severity to this problem.

Due to the severity of this situation, I am recommending that the DWM perform any legal actions necessary to have this site cleaned up.
